

## Pre and Post Treatment Instructions – Kleresca® Treatment

Kleresca® is a treatment with high efficacy and safety. For the best possible treatment outcome, we strongly advise that you read and follow the Kleresca® Pre and Post treatment instructions below.

### Pre Treatment Instructions

#### Makeup and Skin Care Products

In preparation for your Kleresca® treatment, all makeup and skin care products including sunscreen should be removed before treatment to allow penetration of beneficial light into the skin.

#### Protective Eye Wear

Visible light is very intense so you should avoid staring directly at the light while receiving Kleresca® treatment. The use of the protective eye goggles/pads while receiving Kleresca® treatment is mandatory and will be provided by your practitioner.

### Post Treatment Instructions

Following your Kleresca® treatment, apply only the skin care products recommended by your practitioner, which should include a moisturiser with a sun protection factor (SPF).

If Kleresca® treatment has been used in conjunction with other advanced aesthetic treatments provided by your practitioner, specific aftercare advice as provided by your practitioner should be followed.

Make-up can be applied immediately following Kleresca® treatment. However, we recommend the use of mineral based or non-comedogenic formulations that allow the skin to breathe and not block your pores. Please ask your practitioner for specific advice in this regard.

Drink plenty of water to maintain hydration levels.

In the unlikely event that any adverse reaction occurs following treatment, please contact your practitioner immediately for advice.
